

### **Abstract**

A surround entertainment system configured for use with a heating appliance such as a fireplace includes a decorative surround, a display monitor coupled to the surround, a sound system positioned at least partially within the surround, and a  
5 signal module positioned at least partially within the surround and configured to provide a video signal to the display monitor and an audio signal to the sound system. The surround may include several recessed portions sized to receive the display monitor, sound system, and signal module.
